Subject: Gulfco Removal Action AOC

Hi Gary –

Thought I would check in on the status of things after our meeting. As I am sure you know, the predictions for this summer's hurricane season are not good (http://www.noaanews.noaa.gov/stories2010/20100527_hurricaneoutlook.html). As we discussed in the meeting, we would really like to get the tanks contents removed before the heart of hurricane season hits in August/September. Please let me know if there is anything that I can do to help make that happen. If it is looking like the proposed wetland sediment hot spot removal is going to take a while to resolve, I think the group would be interested in finalizing the AOC for just the tank removal now, so that work can get started and then adding the cap repair component (and wetland sediment hot spot component, if acceptable) later. If you think we could/should head in that direction, I can modify the removal action work plan to just include the tank removal work. Let me know if you think that would be helpful.

Thanks.
